### **DETAILED ACTION**

## Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

In the instant application, the applicant uses the legal phraseology "means" in line 1.

### **Drawings**

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the artificial eye sensor, recited in claim 3 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be

Page 3

removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# Claim Objections

Claim 5 is objected to because of the following informalities: The recitation of "compressor is controlled based an air temperature", (claim 5 line 11) is presumed to be --compressor is controlled based on an air temperature--. Appropriate correction is required.

## Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 3 and 4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which

Art Unit: 3744

was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The term "artificial eye sensor" is not a well known term in the art and the specification does not provide sufficient structural or functional detail of the "artificial eye sensor" for one of ordinary skill in the art to make and use the invention as claimed. Since the claim is too ambiguous in scope, no prior art could reasonably be applied to the claim. However, this is not to be a presumed indication of allowable subject matter.

## Claim Rejections - 35 USC § 102

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,2 5, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Kakehashi (US 61929698). Regarding claims 1 and 2 Kakehashi discloses an air conditioning system with a refrigerant evaporator 13 capable of cooling air blown into a driver- passenger compartment, a refrigerant variable displacement (column 19 lines 58-63) type compressor 2, and a radiation thermometer 33 capable of detecting the surface temperature of the evaporator 13 from an amount of radiation energy radiated from the evaporator (column 6 lines 61-68 and column 7 lines 10-15). Kakehashi further discloses that the operation of the compressor is controlled based on a lowest temperature detected by the radiation thermometer (Figs. 14, 20, 22, column 17 lines 57-68 and column 18 lines 1-20).

In regards to claims 5 thru 7 Kakehashi discloses that the air conditioning system has a plurality of temperature detectors capable of detecting air temperatures in areas

Application/Control Number: 10/765,765

Art Unit: 3744

surrounding the evaporator (columns 6 lines 61-68 and column 7 lines 1-10 respectively) and a temperature sensor that detects an air temperature immediately after it has left the evaporator 34. Kakehashi further discloses the operation of the compressor is controlled based on the lowest temperature detected by the plurality of sensors (Figs. 14, 20, 22, column 17 lines 57-68 and column 18 lines 1-20).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Gene L. Bankhead whose telephone number is (571)-272-8963. The examiner can normally be reached on 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cheryl Tyler can be reached on (571)-272-4834. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
